Phase 6: Operation

Operation is a phase where the developed software system will be used by the customer and end users. Therefore, a manual must be written to describe the necessary procedures to install, run and demonstrate the working system. Hence the format for the manual is as follows.

VI User Manual

1. Introduction
   1.1 Purpose – Put here why you wrote this documents including when, who was involved and contributed what etc.
   1.2 Definitions, Acronyms or Abbreviations – Any definition, acronyms or abbreviations used in this document
   1.3 References – Any references used in this document
   1.4 Overview – Write about the remainder of this document

2. Hardware Configuration
   Describe here what hardware is required to run your software system

3. System Parameters
   Describe any hardware/software parameters needed to set in order to run the software system.

4. Operation Procedure
   Describe here how you can get your software to get running

5. Demonstration
   Show your working system.
   Select any one requirement (feature) and execute it from start to the end.
   Attach screen dumps for that requirement.

5.1 <Requirement Name>
   a) Description.
   b) Screen Dumps.
